

ARRL November Phone Sweepstakes 2011 Results

by Steve London, N2IC <n2ic@arrl.net>

“Next year finally came!”

Finally! For years, we have been telling you that the start of solar cycle 24 was imminent and sunspots would return – next year! Well, beginning just a few months before Sweepstakes our dreams came true. ‘Ol Sol was back in force! 10, 15 and 20 meters were again the premier daytime bands in Phone Sweepstakes on November 12th and 13th. We could spread out in the wide-open spaces of 10 meters and when we needed some closer-in contacts there was some breathing room on 15 and 20 meters. Shortly after the Sun went down the MUF (Maximum Usable Frequency) dropped like a rock, leaving 40 and 80 meters to be the night-time workhorses.

reported in the submitted logs with almost equal numbers on 15, 20 and 40 meters (approximately 145,000) and equal totals on 10 and 80 meters (approximately 100,000).

QSO's per hour

This chart shows the number of QSOs made on the bands during each hour of the contest. Compare the terrific 10 meter totals with the band's barely visible presence last year!

For those licensed within the last 10 years, you could now start to believe the tales of the old-timers. For those with new Technician-class licenses, you could fully experience Sweepstakes for the very first time! This year, 1827 logs were submitted. Adding in those that did not submit a log but made a number of contacts, we had nearly 5000 participants. Over 635,000 QSOs were

Choosing your contest meal takes on a whole new meaning in the sidebar “Sweepstakes with a Heathkit Lunchbox” by John Zitzelberger, W6GL at the end of the writeup!

The Not-So-Elusive Clean Sweep

Thanks to the great conditions and favorable activity from all 80 sections, this year provided the best shot at a Clean Sweep (working at least one station in each of the 80 Sweepstakes sections) in many years. This year, 410 participants earned a Clean Sweep, an increase of 123 sweeps over 2010. 36 competitors mentioned in their comments that this was their first Clean Sweep ever. Congratulations!

Another 140 operators came really close to a sweep – missing only one section. What section was the most challenging this year? Just like last year, it was Puerto Rico (19 missed sweeps – see the chart below). In a real

surprise, Rhode Island was the next toughest with nine missed sweeps. Tied for the third most-difficult were Northwest Territories and Santa Barbara (!). For those of you still shaking your head, those four sections were well represented thanks to NP4Z, NP4A, KH2RU/KP4, WP4I, KP4DKE, W1WBB, W1XX, AB1JV, K1VSJ, KA1GEU, VE8EV, VY1EI, VE8GER, VE8NSD, WA6FGV, KI6QDH, W6RFU, N6K, W1PR, AG6AY, and W6RSP. Many thanks to those ops for making their rare sections available.

79 Multipliers - Missed Sections

These were the sections missed by stations reporting having worked 79 sections.

In the next tier of uncommon sections were Vermont, Virgin Islands and South Carolina. Newfoundland-Labrador, last year's 2nd place, slipped to 9th (thanks, VO1s and VO2s!).

Who was the first to earn a Clean Sweep this year? That honor goes to Steve, WA3A who made the sweep in the Single-Op, High Power category at 0232Z. His last section? Quebec. There were only a few more Clean

Sweeps until the dam broke at 0650Z when Phil, NP4Z started holding court on 40 meters, making many folks happy! (A complete [table](#) of stations making a Clean Sweep is provided at the end of this writeup.)

Least-Worked Sections

Most-Worked Sections

The least-worked and most-worked sections in the contest.

Record-Setting Performances

This year, several new categories were added to Sweepstakes. The existing Unlimited and Multioperator categories were split into Low Power and High Power Categories. The existing Unlimited records became the Unlimited, High Power (U) records and the existing Multioperator records became the Multioperator, High Power (M) records. And, of course, all of the section and division winners in the Unlimited, Low Power (UL) and Multioperator, Low Power (ML) categories established new record benchmarks. As a result, this year there were 12 new division records and 30 new section records.

(Complete tables of Division Winners and Regional Leaders can be found at the [end](#) of the writeup.)

Close Races

Every year there are a number of very close section races. Some of these are completely accidental – the two participants didn't even know they were competing in the same category, while others were clearly rivalries extending back many years.

Close Races

Winner	Runner-Ups	Section	Category	Margin of Victory (#QSOs)
AA1JM	W2JU	Ct	A	1
KB3OK	WA3KYY, K8GU	MDC	A	2,29
KA1C	KD1O	Me	A	7
NØLIA	KBØQH	Ne	A	7
VE2JM	VE2HIT	Qc	A	8
W7WEC	WR5J	WWa	A	6
K9CT	K9BGL	Il	B	40
AF1T	KK1KW	Nh	B	18
W1WBB	AB1JV	Ri	UL	19
W5WW	WBØTEV	NTx	U	29
K9YC	K6MM	SCV	U	7
N3OC	WA3EKL,WR3Z	MDC	M	35,52
W4MYA	K4VV	Va	M	31

This year, the most exciting close race was in the Single-Op, Low Power category in Connecticut. David, AA1JM won over Alec, W2JU by just one QSO! Neither David nor Alec operated for the full 24 hours so there was an opportunity for either of them to win. In the New

Hampshire Single-Op, High Power category only 18 contacts separated AF1T and KK1KW out of a total of 1300 contacts.

These close races emphasize the importance of accuracy in copying and logging – one of the reasons for having contests. [Tables](#) for the Accuracy Honor Roll and Error Rates by Category follow the writeup.

Single-Op, High Power (B)

Every year there is a pack of Big Dogs going after the Single-Op, High Power title. The names change slightly from year-to-year but not the level of intensity. This year, Pat, N9RV worked hard to get his Montana antenna farm in shape for the competition and was well-rewarded. Pat took the lead after 5 hours, and held it to the end, relying primarily on 10 meters in the daytime, and 40 meters at night. While Pat has a very capable SO2R (single-op, two radio) station, his SS operation was done entirely with one radio. Last year's winner, Jeff, K1ZM operating

from his VY2ZM Prince Edward Island QTH placed 2nd, 56 contacts behind N9RV. Jeff tried to use 20 meters to his advantage during the daytime but much of the activity had moved to 10 and 15 meters where Jeff's 10 and 15 meter signal skipped over some of the high-population areas.

Moving to the other side of the ARRL domain, 3rd place was captured by Mike, KH6ND operating from KH7X. Mike got off to a great start but once 20 meters closed at 0330Z, he struggled on the low bands until 1700Z. Dan, W7WA took 4th place from Western Washington. It was tough sledding for Dan on the low bands Saturday night, falling more than 250 QSOs behind N9RV – a margin that stayed nearly constant throughout the day on Sunday.

Larry ("Tree"), N6TR travelled to KL7RA to take 5th place. Tree got off to a great start – 186 QSOs in the first hour followed by 180 QSOs in the next hour. That may very well be a Sweepstakes rate record. Unfortunately, the curse of the north came with nightfall and Tree quickly fell behind. However, despite high winds, antenna damage, and power outages just before the contest, Tree handily set a new Alaskan record.

This chart of Single-Op, High Power leader scores shows the hour-by-hour comparison for these five iron men of contesting.

Rich, NN3W, was the only East Coast US station to break into the Top Ten for Single-Op, High Power, taking 9th place.

Single-Op, Low Power (A)

Single-Op, Low Power continues to be the most popular category for SS participants with 887 submitted logs and a Top Ten distributed across all parts of North America. This year, the spread between the winner and second place was virtually a tie. Before taking into account scoring penalties, a mere two QSOs separated the winner and runner-up. Congratulations to both Gary Caldwell,

VA7RR the victor, and Rob Van Geen, NH6V operating from KH6LC!

It was a see-saw battle between these two competitors as shown in the chart below. Gary got off to a great start, 21 QSOs ahead of Rob after the first hour but Rob made up that gap in the second hour. The margin between them was no more than 21 QSOs until 0200Z. At that point Gary lost 20 meter propagation while Rob continued to have two more great hours on 20 meters thanks to his Hawaii "Big Island" QTH. By 0400Z Rob had a 120-QSO lead over Gary.

This margin stayed essentially constant through the nighttime hours. Both competitors began their off-time around 0830Z, biding their time until sunrise brought the high bands back to life. With Gary's British Columbia sunrise being two hours before Hawaiian sunrise, Gary made up a 136-QSO deficit to take a 1-QSO lead at 1700Z. From there the lead shifted back-and-forth with no clear advantage for either competitor. When the dust settled and the logs were adjudicated VA7RR won by five QSOs (including scoring penalties).

Art, K1BX led all East Coast challengers, placing 3rd and setting a new section and division record. Perennial Top Ten finisher John, KK9A operating from W4AAA took 4th place without benefit of a 10 meter antenna. Paul, N4PN placed fifth.

Single-Op, QRP (Q)

This year 75 brave souls entered in the QRP category. Congratulations to the winner, Mark, K6UFO operating from NN7SS near Seattle. Despite running only 5 watts, Mark sustained some nice runs on 10 meters with 676 QSOs and a Clean Sweep.

Chris, W1MR (ex-KA1LMR) took 2nd place, moving up from 6th place in 2010 with 177 more QSOs and a Clean Sweep. In 3rd place is Dean, NW2K. This appears to have been Dean's first serious QRP SS effort and he set a new

section and division record as well as turning in a Golden (perfect) Log! Dean had good success running on 40 meters during the daytime. Phil, NØKE moved up to 4th place this year and Bob, N3UR moved up from 15th to 5th place.

Dale Slater got off to a fast start in contesting at the KL2R Two Rivers Multioperator station, assisted by Carl WL7BDO. (Photo by Larry KL7/N1TX)

Unlimited, High Power (U) Category

The Unlimited, High Power category was very popular this year with 278 entries. Congratulations to Mitch, W1SJ operating from WB1GQR in Vermont on his second consecutive victory in the Unlimited category and a new division record. Mitch ran away from the pack of competitors with 212 more contacts this year, relying primarily on 80 meters at night and 10 and 20 meters during the day with only a few QSOs on 15 meters.

Second place went to Dave, K6LL operating from his postage-stamp sized QTH in Arizona. While racking up big numbers on 40 through 10 meters, Dave made but 1 QSO on 80 meters! Matt, WX5S operating from W7RN in Nevada placed 3rd, only 39 QSOs behind Dave. Just 14 QSOs back, Tyler, K3MM led the Potomac Valley Radio Club crew with his 4th-place finish. Tyler made only 3 QSOs on 10 meters, relying almost entirely on 20 meters for his daytime operating. Dean, NØXR moved up from 10th to 5th place this year, setting a new division record.

Unlimited, Low Power (UL)

118 participants tried this new category this year. Leading the pack was Dan, KØTI operating from Minnesota. Dan made 698 QSOs and a Clean Sweep in a part-time effort. In 2nd place from New Mexico was Duffey, KK6MC. Duffey did it all with inverted-vees

and lots of persistence. The next two places were also from Minnesota. Congratulations to Al, KØAD and John, KØTG. Only five QSOs separated these competitors. Placing fifth was Eric, N3TD – his first Sweepstakes using his own station.

In almost all ARRL sections, scores in the Unlimited, Low Power category were generally much lower than in the Single-Op, Low Power category leaving lots of opportunities for new records to be set in 2012 and beyond!

Multioperator, High-Power (M)

This year the Multioperator category was split into separate High Power and Low Power categories. 79 entries were received for the High Power category. The W6YI team of Jim, W6YI, John K6AM, Dan N6MJ and Dennis, N6KI, claimed the #1 spot for the fifth consecutive year! The San Diego dynasty continued with 2327 QSOs! The W5RU Louisiana team moved up in the rankings from 6th place in 2010 to 2nd place in 2011. Congratulations to the W5RU team!

The W5RU Team, #2 in the Multiop, High Power Category, (l-r) Ted, KN5O; Steve, KG5VK; Mark, K5ER; Scott, W5WZ; and Dallas, K1DW. (Photo by Steve, KG5VK)

Another big jump in placement came from the K7IR team in Eastern Washington. Congratulations to K7IR, K7XH, K7XS, K7EDX, N9ADG, and WA7IR, jumping from 10th place to 3rd place! In 4th place was the Colorado team of KØDU and KØCL operating from KØDU's QTH.

The next three slots were incredibly close – with only 12 QSOs separating 5th, 6th and 7th places. Congratulations to team WØNO in Kansas, team NP2B in the Virgin Islands, and team K4OV in North Carolina.

Multioperator, Low-Power (ML)

In the first year of the Multioperator, Low-Power category, 64 entries were received. The top three slots went to teams operating from rarer sections – Northern New York, West Texas and Wyoming.

Moving from the High-Power to the Low-Power category was this year's winner, K2NNY operated by K2DB, K2CS, N2TWI, AF2K, K2QZR, and KC2QLJ. The team made 1242 QSOs with over half of their contacts on 80 meters. The team clearly struggled on the other bands.

Second place went to the N5DO team of N5DO and KE5OG. They made good use of 40 meters at night and all three high bands during the daytime despite being handicapped by a low, non-rotating antenna. K7VU and K7RDC operating from K7VU came in third, making good use of 15 and 10 meters. Neither the second or third-place teams made many QSOs on 80 meters – a tough band with low power from the thinly populated flyover zone!

The Ohio team at N8HR made 962 QSOs and a Clean Sweep for the #4 spot. 40 and 80 meters were good to them but the high bands were not! A similar case can be made for the 5th-place husband-wife team at VE3MGY making only 5 QSOs on 15 meters and no QSOs on 10 meters.

School Club (S)

19 schools competed in the School Club Category in 2012. Last year's battle between Stanford University, W6YX and Hesston College, KØHC continued unabated as shown in the following chart. Last year W6YX won by seven QSOs. This year, it by was 12 QSOs! Unlike last year Stanford got off to a slow start, down 43 QSOs in the first hour and 105 QSOs at 0300Z.

School Club Winner Comparison

The earlier sunrise in Kansas gave the Hesston crew an advantage in the early morning, ahead by as much as 172 QSOs. Team Hesston may have been pretty confident at this point but then things started to unravel. Team Stanford took advantage of great daytime conditions on 10 and 15 meters to crawl back into contention. 63 QSOs behind at 2000Z, 12 QSOs behind at 2300Z, finally pulling ahead at 0030Z for victory at the 0300Z bell!

The University of Alabama club, W4UAL placed third. Harvard University, W1AF moved up from 7th to 4th place. The Missouri University of Science and Technology, WØEEE jumped from the 10th to the 5th slot this year by almost doubling their number of QSOs.

Other schools making the Top Ten were Worcester Polytechnic Institute, W1YK; Michigan State University, W8SH; Clarkson College, K2CC; South Dakota School of Mines, KØVVY; and University of California-Santa Barbara, W6RFU.

The School Club category's 7th-place entry, Michigan State University Team W8SH, (front-to-rear) Hanna, KD8OKM; Scott, KB8VWM; Mike, KB8ZGL; and Andrew, KE7ESD. (Photo by Gregg, WB8LZQ)

Club Competition

Thanks to the many clubs who rallied their troops into getting on the air for Sweepstakes. For many club members Sweepstakes and Field Day are their major on-the-air efforts of the year. We can't thank the clubs, and of course, their members for their commitment, dedication and understanding families. This year, 1522 participants submitted their CW and Phone SS scores towards their club aggregate scores.

In the Unlimited Club category, the Potomac Valley Radio Club ran away from the other mega-clubs with 291 entries for 22.9 million points. This is a 6% increase in

entries and total score over 2010! In second place was the Northern California Contest Club with 189 entries totaling 14.8 million points. The Society of Midwest Contesters again took third place with 137 entries and 8.1 million points.

In the Medium Club category, the Southern California Contest Club emerged victorious with 47 entries and 4.5 million points. That's an impressive 96,000+ points per entry! The Central Texas DX and Contest Club moved up to second place with their 37 entries for 3.8 million points. There was a close race between the 3rd-place Frankford Radio Club, and 4th-place Arizona Outlaws Contest Club. Just one more high scoring entry from the Outlaws would have propelled them ahead. 5th and 6th place were even closer, with only 20,496 points separating the Tennessee Contest Group from the Western Washington DX Club. To put that difference in perspective, it's only a single 150-QSO entry.

In the Local Club Category, the Albuquerque-based New Mexico Big River Contesters took 1st place with 9 entries, averaging 95,821 points per entry. Well done! The Iowa DX and Contest Club took 2nd place and the Kansas City DX Club took 3rd place. Only 10,000+ points separated the 4th, 5th and 6th-place clubs – the Delara Contest Team, Spokane DX Association, and Bristol (TN) Amateur Radio Club.

Acknowledgments

Many thanks to "Tree" N6TR for his hard work checking the logs and to George, K5TR for logistical and infrastructure support. In addition, K5OT, K9ZM, K9JK, KB9OWD, N6TV, and K9DUR painstakingly typed in handwritten logs so that they could be properly adjudicated.

Sweepstakes with a Heathkit Lunchbox

by John Zitzelberger, W6GL

Although this log submission consists of but one contact, it represents a most satisfying and challenging Phone Sweepstakes possible for me. Since 1970 I have operated the SS in all shapes and forms. The first time was as a Novice, later teaming with local teen friends who otherwise would have blown each other off the air due to close proximity. This led to many multi-op efforts over the next decade.

Later I became interested in QRP, with quite a few years undertaking both CW and Phone efforts under this class; even making a Clean Sweep a few times. Looking again for a different experience, a "Zack Lau trick" was played two years prior in the form of waiting for the CW SS to begin, then sitting down to start building from scratch a superhet two-band half-watt transceiver from the ground up. Breaking the 100-QSO target for this contest using that haywire setup was quite a thrill.

This year, recovering from a recent surgery, there just wasn't the physical energy within to use my voice for the contest. Being a bit down on not being able to operate, an idea hit the evening before the contest. With the high bands being nicely open could a contact be made - even just a single Phone SS exchange - using an old Heathkit Tener stored somewhere out in the shop? The Tener is one of the "Lunchbox" series of crystal controlled AM transceivers offered by Heath in the early 60's. It puts out just about a half-watt of unmodulated carrier when carefully peaked. To add to its "conveniences", the Lunchbox employs a regenerative receiver that has a small tuning knob. One where one-half turn of the dial covers the entire 10 meter band from 28.0 through 29.7 MHz! The Tener's dial comes out to almost 4 megahertz per turn. Yet the regen is surprisingly sensitive and even adequately selective for AM service.

But what about in a contest like the Sweepstakes? So getting out to the shack around 2100 as the Sweepstakes began, the rig was luckily located. With a 50-watt slug in place the Bird wattmeter needle barely deflected past one-half of the first minor division. Swathing the tuning control over its half-turn of revolution revealed a crazy mix of strange sounding signals present. CW stations chasing DX caused blocking sounds on the band's low end, which gave way to the quacking of what sounded like hundreds of ducks calling "CQ Sweepstakes" in another language, while tuning still further and higher revealed many quiet carriers with beautiful sounding AM decoded voices.

All the AM stations heard were having ragchews; talking about their transmitters, receivers, antennas, the weather. No one was calling "CQ Sweepstakes" up here. I was bit nervous knowing that most of the people were on AM up there to get away from the contest and enjoy a good old fashioned QSO despite it. Yet the Sweepstakes has been going on way before SSB became popular. It made me wonder how the bands would have sounded on an HRO or Hammarlund or Hallicrafters receiver during a Phone SS during the 50's?

John, W6GL piloting his Heathkit Tener.

Taking time to confirm that 29.001 was in the clear I began a series of "CQ Sweepstakes" calls on 10 Meter AM Phone, explaining that I was running the half-watt from a Lunchbox. It took several such tries over 20 minutes before a very nice sounding signal quieted the Tener's rushbox receiver. "W6GL this is KØCDJ" blasted back.

Being thrown into a state of shock and surprise, I answered providing name QTH and signal report, then adding that I was looking to make an AM Phone Sweepstakes contact. Bill was licensed in 1955 and it became clear he had lots of experience operating the SS in the AM days, as upon returning he immediately exclaimed "now for the goodies", and like a pro provided the Number, Precedence, Call, Check, and Section.

After confirming my exchange we continued through a few rounds of talking about the rigs, antennas, weather, the Lunchbox, until it became apparent that my little signal was becoming harder to copy on his end as more stations came up to open the 10 meter AM segment. KØCDJ made my day and operating year as well, as it was as much of a thrill working him using QRP AM, as starting to build an entire transceiver from scratch for the SS those few years earlier. I'll be remembering Bill and this exciting QSO for a long, long time!
