

160 Meter Contest 2016 Results

By Gary Breed, K9AY (k9ay@k9ay.com)

How close did you get to a Sweepstakes-style Clean Sweep?

1311 logs have been received, entered, and checked, and all eight entry categories have been scored for both US/VE and DX competitors. Take a look at the results tables to see if you and any of your friends made the Top Ten box. These are the operators who get bragging rights until next year!

Making a Clean Sweep

In this contest, the US/VE multipliers are the 83 ARRL/RAC Sections, as they are in the November Sweepstakes contests. Although there is no official recognition for working all of them (a “Clean Sweep”) in the 160 Meter Contest, it is still fun to try to work them all since it rarely happens.

This time, thanks to VE3JM, VE3KI, and VE4EA activating VY1AAA in the “remote” NT section via the Internet for 114 QSOs (more on this later), fifteen entrants completed the sweep! The K7CA multiop team even managed the feat using low power, and three single-operator stations got it done without spotting assistance.

Stations working all 83 ARRL/RAC Sections

An Unlimited success

In the 2016 ARRL 160 Meter Contest, 44 percent of all submitted logs used spotting assistance, either choosing the Unlimited category or as Multioperator entries. There were four all-time Unlimited category records set this year — US/VE records at all three power levels, and a high power DX record. You can find the full list of section and country records at this link: www.arrl.org/contest-records

Assisted (includes SOU + MS)	580	44%
Non-assisted	731	56%
Total	1311	

Entries using spotting assistance

Many participants in 160 meter contests are not concerned with winning, but really enjoy the high activity as they add to their DXCC totals, work on WAS, or pursue other awards. Many others just want to experience a band they rarely operate. 160-meter activity is typically pretty quiet unless there is a special event like a contest or DXpedition, or a time when Mother Nature provides exceptional conditions that draw operators to the band. During these times, a spotting network can help you find and work more stations.

The Results

Of course, you can easily scan the Top Ten lists to see who the top scorers were in each category. There are some accomplishments worthy of note:

High Power Multioperator

The perennial powerhouse on the New Jersey shore, W2GD and friends, won again this year, but only by a small margin. Midwest stations at NØNI and WB9Z (using K9NR’s call) were within a few percent of the top score, and out west the team at NA7TB in Arizona did a terrific job to stay close and take the fourth spot!

Station	Score
W2GD	504,708
NØNI	483,588
K9NR	442,468
NA7TB	411,628
NR4M	398,895
N1LN	373,164
N2CEI	367,375
VE2OJ	258,752
N3EB	240,750
W4ML	239,820

Top Ten W/VE Multioperator High Power

The NA7TB station was built by long-time topbander Milt Jensen, N5IA. Milt died June 9, 2016 after falling from one of the towers at the site despite his many years of experience working for a power company and a telecommunication company. The station, with its 8-circle 160-meter array of full-size ¼-wave verticals and eight two-wire Beverage receiving antennas, is now known as the Milt Jensen Memorial Station.

Photo courtesy Top Band Club of Arizona.

Single-op Unlimited

Among the Unlimited contestants, John, VE3EJ, made the top of the list, besting the second-best score by more than 10 percent. Out in the middle of continent, K5NA (STX), KVØQ (CO) and WØAIH (WI) showed that stations away from the East Coast can be competitive in this all-out maximum category.

W3LL (ND3D, op)	332,508	W3BGN	332,367

Top Ten W/VE Single Operator High Power

Single-operator

The Single-op winner was Peter, K3ZM, who is always near the top. This year, he had a healthy lead over the rest of the pack. Like the Unlimited group, this category also had respectable representation away from the Eastern Time Zone, with WØSD (SD), NØTT (MO) and N8OO (LA) making it into the Top Ten.

Low Power Multioperator

The Multi-op, Low Power category has gotten good support since it was added to the mix in 2011. All low power categories are always well-represented by stations in the center of the continent.

WQ4RP	63,248
N8ZA	60,768
VE5ZX	42,624
W5WTM	36,792
W3KWH	28,662

Top Ten W/VE Multi-single, Low Power

This year, three of the top four are from the Mountain Time Zone — #1 K7TD (CO), #2 NA5NN (NM) and #4 KK6MC (NM) — as well as three more well away from the coast.

Single-operator Unlimited

Only two of the Top Ten Unlimited stations were located near the “advantageous” East Coast. The top three represent different advantages: Really big antennas — decisive winner Al, K7CA — and plenty of contest experience combined with good central locations and top-notch stations — #2 VE3MGY and #3 KØTI.

KIØI	104,232	ACØW	125,460

Top Ten W/VE Single-Operator Low Power

Single-operator

The unassisted Low Power list includes only one East Coast station, in 8th place. The winner is Midwesterner, Chad, WE9V who had the advantage of an extremely quiet rural Wisconsin QTH. Nine of the Top Ten are centrally located, from OH, MI, IN, TX, IL, MN.

QRP

Single-op Unlimited

Somehow, the terms “QRP” and “Unlimited” don’t seem to be compatible, but a sizeable handful of participants chose this as their operating category. At the top of the list is repeat winner, Glenn, WØGJ. Second place finisher N9SE was well ahead of the pack despite being far back from the leader.

Single-operator

Long-time QRP entrant, Mike, W3TS, earned the top spot from his EPA QTH, followed closely by KA1J in CT. The rest of the SOQRP Top Ten represent WI (2), AZ, NC, TX (3) and MN. That covers a lot of the continental U.S.

Top Ten W/VE Single Operator QRP

DX Top Ten by Category

About 11% of the entries in this contest came from DX stations. This may seem low, but the structure of the contest requires that a W/VE station be at one end of every QSO. Many DX stations have limited ability to reach the target area, and since DX-to-DX QSOs don’t count, participation overseas is limited. Of course, their activity is very much appreciated by the W/VE operators!

Top Ten DX Single Operator Low Power & QRP

Entries by Category

It's always interesting to see how many stations enter each category. This year, Single-operator, Low Power was the most popular, closely followed by Single-op Unlimited, High Power.

Entries by Category

About that VY1AAA Operation

Operators who have entered the 160 Meter contest competitively know that the most elusive section, and the one that usually prevents getting a Clean Sweep, is the 'NT' Section, which includes the Northwest Yukon, and Nunavut Territories, in Northern Canada. There are not many active HF operators in that area, but J Allen VY1JA is one.

A few years ago, several amateurs, including Gerry Hull, W1VE, embarked on a project to get J's station set up for remote operation over the Internet. The call sign VY1AAA is used for remote operations from the site.

Numerous successful operations have ensued. According to W1VE, J's Internet connection is a 15Mbps/1 Mbps DSL line from the phone company and is amazingly reliable.

In December 2016, Cary, VE4EA (from Winnipeg), and Rich, VE3KI (from Ottawa), were invited to go to Vlad, VE3JM's station, outside of Ottawa, for a Multi-single operation in the 160 Meter contest.

Cary has the RemoteRig box and K3/0 mini hardware to allow remote to VY1AAA. Cary decided to bring his gear with him, because both Rich and Vlad were very interested in learning about remote operation.

At the VY1AAA station end, one of the antennas J has been working on is the V-Beam. Its apex is at 70 feet

and, currently, the ends are only at 40 feet. However, the elements are 600 feet long.

View from apex of VY1AAA Vee Beam (Photo courtesy J Allen, VY1JA)

Low bands are amazingly quiet from the Yukon — Beverages optional. Because of the quiet, often you hear many people you cannot work.

VY1SLZ Working on the Vee Beam (Photo courtesy J Allen, VY1JA)

While Gerry was in a hotel room in Toronto, he helped the guys get through some network issues, but once that was done, they were up and running. For Vlad and Rich, it was their first remote operating experience.

Vlad VE3JM in the foreground (operating VY1AAA) and Rich VE3KI (operating the local station, VE3JM) in background. (Photo courtesy Cara Rubinfeld, VE4EA)

Club Competition

Winning gavels for their 2016 participation are: Potomac Valley Radio Club (Unlimited), Contest Club Ontario (Medium) and Central Virginia Contest Club (Local). The Unlimited clubs alone represent nearly 25 percent of the total number of submitted logs, plus a slightly larger total from the Medium and Local groups. Overall, half the entries had a club affiliation!

finding new participants as they show up, and digging out weaker stations that were unable to get your attention when the band was busy. Personally, I find the change in operating style as the contest proceeds to be quite interesting. Yes, it is frustrating at times. But it can be exhilarating when the band suddenly opens up at European sunrise or prime evening hours in Africa or South America. Or when that Pacific or Asian station calls you during that little bump in propagation at their sunset. Or simply when an unexpected new section multiplier goes into the log!

Wrap-Up

The 2016 ARRL 160 Meter Contest is history, and with the next solar cycle just beginning, the next 2-3 years have the potential to be a lot of fun for Top Band enthusiasts! Each year, the contest provides an incentive for improvements to the low band capabilities of many stations. And it serves as the excuse for a new group of hams to enjoy the unique experience of operating 160M with an extremely high activity level.

Be ready at 2200Z on December 1, 2017! The next ARRL 160 Meter Contest will again fill the band with competitive, but courteous operators looking for QSOs from all ARRL/RAC sections, and as many DXCC entities as possible!

This is a two-day contest!

After every 160 Meter contest, there is always some complaining about the slow rates and lack of excitement on the second day. Helloooo! This is an event that stretches out over two nights and the daytime between them. It is a single-band contest, so naturally the number of potential QSOs is mathematically reduced as the contest progresses.

In your author's opinion, the complainers just need to get over it and focus on the change in skill and effort that must be applied later in the contest. The challenge shifts from maintaining high rates to locating additional multipliers, working DX for their higher QSO points,

Soapbox and E-mail Comments

As I've done for several years, your author selected some comments from posts to the "3830" list, Soapbox comments submitted with the logs, notes from a couple club e-mail lists, and private e-mails. I've organized them by topic—I think this collection will give you some insight into the contest from different points of view.

In Memoriam—

Inaugural operation from the Milt Jensen (N5IA) memorial station located in Safford, AZ. The station consists of an 8-circle TX array and a system of 8 bi-directional beverages. It was a dream to use this station in this contest. —NA7TB (AA7A op), MSHP

Farewell to K8PO [SK 23 Oct 2016 – ed.]. I am really going to miss Paul. He outscored K3ZM on several occasions in different 160 meter contests from his splendid station in Maine. Paul was a complete gentleman and an honorable contester. What a loss. —K3ZM, SOHP

Operating Experiences—

Only planned to try hand out a few points. But got rather engrossed. Band was in great shape and very easy to get through at times. —W5/MMØLID, SOQRP

This is only my second or third time in the 160-M contest. The more times I work it, the better I like it. Just wish I had a decent antenna system for 160. —N5XE, SOLP

I did manage to silence the neighbor's dimmer switch, at least temporarily. Another neighbor, however, apparently turned on another noisemaker right at sunrise Saturday. Such is the lot of the urban contester. —K9MA, SOHP

Thanks for the QSOs! It was a fun contest. I've never heard so much constant activity on 160m. —K4AFE, SOUHP

First time in this contest - what a real hoot! The band was crowded from the bottom up to 1870. My second season on Topband and it continues to amaze. —W6SZN, SOHP

This is a personal best on 160 with limited hours Saturday night/Sunday morning. —N1DC, SOLP

Great fun! 100 Watts, Flex 6500/Maestro working beautifully. Had an amazing time with this one. Lots of fun ops, noise all night last night, but still had my best

160 effort ever. WAS in this contest alone! —AB5OR, SOULP

Highlight was having a JA call in at 1120Z. I have never been called by a JA on 160 in any contest. —N1UR, SOHP

Band Conditions—

Having lots of fun getting back into Contesting. Looks I need to resolve a few minor issues. Band conditions were pretty good throughout and especially with the band open on Saturday Afternoon. —VE3YF, SOLP

Conditions to EU seemed just fine both nights - and especially Northern Europe the second night - but not a whole lot of EU worked. —N3QE, SOUHP

My favorite contest of the year! Band conditions were good and quiet, and all equipment worked well. I didn't have as much chair time as I'd have liked, thanks to a busy honey-dew list that required my presence elsewhere, but the 9 hours I did have were productive with a few good runs. —W2IRT, SOHP

Station Descriptions—

I have no 160M antenna, only an 80-6M Carolina Window. On a whim, I decided to see how the K3 would tune it. The SWR was 3:1 or higher, but enough RF escaped into the ether to work 38 stations in 24 sections. —N4CF, SOLP

Remote operation of my MD station from S. FL. K9AY fixed on NE direction made an amazing difference with New England stations that were in the mud with my TX antenna (65' Tee), but S9 on the K9AY. —N3AM, SOUHP

Entered mostly to test receiving antennas. Friday night I had a flag only, as there was a broken feedline connection on the 3-element short vertical array. Saturday morning, I fixed the feedline and installed a 350 foot beverage to NE. Saturday night I used all three extensively. They are all keepers. —N3RD, SOUHP

This contest was the first real test of a years' worth of station and antenna improvements for 160 meters. I added a legal limit amplifier and a K9AY receiving loop as well as restrung the inverted L getting the horizontal leg up higher. The amplifier replaced my 500 watt amplifier and the K9AY loop replaced my Hi-Z vertical array. As a result I was able to hear better than ever before. I am also a little stronger on transmit. —N3HEE, SOUHP

In trying to maximize my small suburban lot for contesting, I've been using an Inverted L with an FCP counterpoise. I also laid out a relatively short BOG aimed at about 70 degrees and set the K3 in dual RX diversity. —NQ6N, SOUHP

K3/10 at 5 watts to a 260' inv vee up 50' at the center. Condx seemed good from MN, almost no QRN and big signals at times. Thanks for your great copy of my QRP sigs. Had a good time! —KEØTT, SOQRP

Visits from Murphy—

Had to spend most of the day Sat fixing beverages that were damaged from fallen limbs in the woods. Conditions seemed pretty good from here to EU but I don't believe a whole lot of stations were on from there. —W5MX, SOHP

For some reason I kept getting disconnected from packet spotting. Annoying when you're running assisted. Could be RF problem in PC router. —VE4GV, SOUHP

Eternal problem is AMTRAK and their RFI from the overhead power lines 100' away. Always some arcing but the majority of trains run right around Grayline. Must relocate... —KA1J, SOQRP

WAS and Section Sweeps—

The propagation gods smiled down on us and the participation level was impressive. It was a thrill to work a US/Canada clean sweep and so many country multipliers with 114 5-point Qs. —K9NR (@WB9Z), MSHP

I don't remember too many times ever getting a sweep in ARRL 160. That was a true highlight. Thanks to VY1AAA and VO1HP for getting on. —K9CT, SOUHP

Never thought I'd get a sweep on 160 and never thought my last section would be LAX. —NN3W (@N3HBX), SOUHP

VY1AAA called around 0514Z to finish my one and only 'clean sweep' of ARRL sections during an ARRL 160 test. —K1LT, SOHP

This has always been my favorite contest and this year is the 42nd year that I have participated and sent in a log. I was surprised that I managed a sweep of all the sections. I operated in the Unlimited category and it was helpful to have the DX cluster spots working for me. Every section called me except for the last two sections. Early Sunday morning I went out looking for VY1AAA and found him for a QSO and my 82th section. Then, a little later, I

started looking for VO1HP and got him for the last section. —K5NA, SOUHP

From the DX Side—

Remote operation from Berkeley, CA. The first night of the contest had much better conditions towards W0/7 but band closed early. Second morning lacked W7 condition and only very few Øs were logged, but band was open until about 20 min after sunrise. —DG1CMZ, SOUHP

Remote operating from Montana into the Signal Point station on Curacao. The first night was very good, but night two was a real slog with the constant tropical QRN. —PJ2T (KB7Q, op), SOUHP

Great night [Saturday]! Very nice conditions. Couldn't be on Friday night. Arrived at the station at 02 UTC, connected antennas in the dark, then scanned the band. Was nice to see so many stations, the band was quiet. —CW5W (CX6VM op), SOUHP

Ended 1st night with 200 qsos! Did 0 to 25 QSO (max per hour) second night! Crazy!! Best moment more than an hour after my SR be called by VE7, OR, MB! My worst score in this contest! But I love so far this crazy game! —TM6M (F1AKK), SOHP

Hard work, low cndx and small signals. but fun... —OU2V (OZ1FJB), SOUHP

First time from HP, using 37m long wire hanging out of window on 24th floor of apt. Interesting that loud stations would CQ in my face whereas barely readable guys would get my call correct the first time and complete the Q. —HP1XT, SOUHP

Conditions absolutely awful. Last year had twice as many contacts. —GW5R (GW3YDX op), MSHP

Regional Leaders

SOQRP/LP/HP = Single-Op; SOUQ/LP/HP = Single-Op Unlimited; MSL/MSH = Multioperator, Single Transmitter
