

On April 2, 2012 the ARRL DXCC Desk modified the card checking rules regarding the handling of:

160 Meters

Deleted Entities

The handling of deleted entities are as follows:

Deleted Entities – All DXCC card checkers are now authorized to check applications containing cards for deleted entities. Unlike 160 Meters there are no restrictions for checking these deleted entities.

When listing deleted entities on the record sheet it is not necessary to make a separate listing for these, just continue to sort all of the cards being prepared for the submission and sort them along with the other cards according to the sorting instructions. DXCC will process them and the computer will sort it all out in the end.
