

Step 1

Download Trusted QSL Software

Logbook of The World uses a software package called Trusted QSL. The Trusted QSL software that you downloaded and installed on your computer is where you will manage all LoTW functions including call sign certificates, station locations and signing and uploading your log files.

Trusted QSL software is available for Windows and Mac OSX operating systems.

Linux users can build the software from the source code for the tqsl.lib library and the TrustedQSL applications. (ARRL does not maintain packages for the plethora of Linux distributions. For assistance with obtaining a packaged version for your Linux distribution, contact your distribution's maintainer.)

The software is downloaded from the web at www.arrl.org/instructions

1. From the web page <http://www.arrl.org/instructions> click the link to begin downloading the software for your operating system, PC or MAC.

Choose TQSL either for Window or TQSL for Mac.

Trusted QSL uses a Windows installer

Just click NEXT and agree to the terms then install.

When the program is finished installing you will have an icon on your desktop that looks like this:

Double clicking this icon will open the Trusted QSL program. Proceed to the next step.
