About the Cover
Tuck Choy, MØTCC, considers inductor losses in Pi networks in this second and final part of his series. He discusses the T-matrix formulation, as well as its use to develop the response functions for the Pi network, and presents an analysis of the exact and approximate results for bandwidth and harmonics suppression predictions. Choy also presents some preliminary experimental measurements using an Arduino-based vector network analysis system.

Features

2 Perspectives
Kazimierz “Kai” Siwiak, KE4PT

3 Pi Networks With or Without Inductor Loss — Part 2
Tuck Choy, MØTCC

5 Patterns and Polarizations of Modestly-Sized Loop Antennas
Darrel Emerson, AA7FV; G3SYS

13 Tuning Short Antennas for Portable Operations
Kazimierz “Kai” Siwiak, KE4PT and Ulrich L. Rohde, N1UL

24 More Octave For Complex Characteristic Impedance
Maynard A. Wright, W6PAP
