

April 2019 Frequency Measuring Test

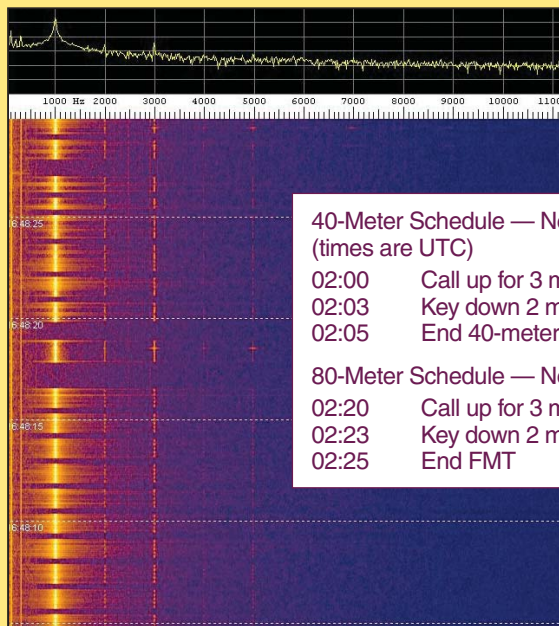

0200 – 0225 UTC, April 12

The format of the April Frequency Measuring Test (FMT) will be to measure a single-frequency signal transmitted first on 40 meters then on 80 meters from one station in eastern Oklahoma: K5CM.

The FMT will begin at 0200 UTC, April 12 (Thursday evening in North America). Measure the transmitted frequency and report your results at the new ARRL FMT page, fmt.arrl.org. Results must be submitted by 0200 UTC on April 15, at which time the results will be published on the website.

To be listed in the “Green Box” of the results, submit a measurement with an accuracy of better than 1 Hz.

Although the “call up” is scheduled to start at a very specific time, K5CM will try to start earlier. Every effort will be made to start the key-down measurement period at the published time.
