In the October 1988 *QST* Technical Correspondence item, "HW-9 Tips," pp 42-43, U1 was not identified. U1 is a 4011 CMOS NAND gate (Radio Shack 276-2411). You can use an LM78L05 or LM340-5 for U2. Be sure that the shield of the cable (RG-174 is suitable) connecting the marker output to pin 1 of the second mixer is grounded on both the oscillator and TR boards. (*Tnx Larry East, W1HUE*)
