## A Personal Thank You from a Teachers Institute Participant on using Amateur Radio in the Classroom

I had the privilege of attending a Teachers Institute (TI) on Wireless Technology at ARRL Headquarters during the summer of 2014, along with 11 other professional educators from across the country. Every one of the 4 intensive days of this program was chock-full of new information, hands-on exploration, and innovative ways to bring Amateur Radio and Wireless Technology into the classroom. More than that, this course gave me fresh energy and all the resources I needed to help my students experience hands-on STEM-related lessons. My classmates and I were excited to bring all we learned back our schools and share it with our students. This was truly one of the most professionally run professional development courses I have ever attended, and was certainly one of the most enjoyable.

I am truly grateful to all the ARRL members who helped make this amazing program possible! I will continue to use all that I learned from this TI to open a new world of science and technology for my students for many years to come.
