□ Please refer to “Electromagnetic Pulse and the Radio Amateur,” Nov 1986 *QST*, p 33. The radical sign in Eq 3 should extend over the variable, SWR. In Eq 4, extend the radical over the value, 1.5. This change alters the final value of V, which becomes 88.32. Also, the FCV (final clamping voltage) would then be equal to 264.96.

This error was brought to our attention by Sheldon C. Shallon, W6EL. Author Bodson, W4PWF, verified the error, which exists in the original document on pp 5-11 to 5-13.
